
(a) y = g_a(u) against x, 100,000 samples
a = 0
a = 1
a = 2
y
x (signal)
(b) ρ falls, λ should not
ρ or λ
ρ (Pearson)
λ (KSG on normal scores)
strength of the monotonic non-linearity a
(c) λ estimators
λ
exact = r
KSG on normal scores (maps)
Knuth bins (old production)
Knuth bins on normal scores
rank (equal-count) bins
KSG on raw values
strength of the monotonic non-linearity a
