(a) samples
a = 0
a = 1
a = 2
y = g_a(u), standardised
x (signal)
(b) ρ falls, λ should not
ρ or λ
ρ, exact
ρ, sample of N = 51 (median, IQR)
λ, exact = r
λ, rank bins (median, IQR)
strength of the monotonic non-linearity a
(c) λ estimators
Knuth: λ = 0 in 14-28% of draws
(one bin chosen for a variable)
λ
exact = r
rank (equal-count) bins
Knuth bins (production)
KSG, k = 4
strength of the monotonic non-linearity a
